

## Full Notch Creep Test (FNCT)

The OCS Full Notch Creep Test (FNCT) is a widely used method of classifying polyethylene materials in terms of their slow crack growth behaviour under accelerated conditions. A circumferentially notched body is loaded in a tempered wetting agent with a defined tensile stress, and the time until a break occurs is measured.

### Testable Raw Materials

- Polyethylene materials

### Features

- 15 sample stations with independent tensile stress adjustment and data acquisition
- Load application through easily adjustable lever weight system
- Precise adjustment of tensile stress through electronic force sensor
- Uniform bath temperature control through extensive bath insulation
- Exhaust air connections for targeted vapour extraction
- Continuous pH value measurement with adjustable warning and alarm thresholds
- No time limit on test times, time resolution: 1 second (real time)
- Operation via touch panel with data trend as well as optical and acoustic alarm functions
- High chemical resistance of the material used (stainless steel)
- Developed according to ISO 16770

### Sales Team

## Technical Details

<b>Tensile force range (infinitely variable pull arm system with 115–315 N)</b>	2.5–6.5 MPa for samples 10 × 10 × 100 mm with notch depth of 1.6 mm 15–40 MPa for samples 6 × 6 × 90 mm with notch depth of 1.6 mm
<b>Force measurement</b>	Electronic force sensor with a resolution of 0.01 N
<b>Fluid volume</b>	Approx. 55 l
<b>Level control</b>	Stainless steel float sensors and magnetic valves
<b>Inlet pressure range for the supply of demineralised water</b>	0.2–8 bar (3–116 psi)
<b>Communication protocol</b>	MODBUS (RTU, TCP/IP), PROFIBUS, PROFINET, OPC (Server/Client), CSV file, customer-specific
